

TargetFax™ Merge

“Tired of hand faxing your reports and documents?
Reach your customers in seconds with the power and flexibility of TargetFax™ Merge.”

Why Mail Merge To Fax

TargetFax™ Merge is a highly productive method of delivering documents or reports to your clients real-time via fax. TargetFax™ Merge enables you to generate and fax form letters, reports, data sheets, invoices, accounting statements, etc. quickly and as easily as you would print them. TargetFax™ Merge is also very useful for applications that generate custom reports in which each may be radically different for every recipient. TargetFax™ Merge supports any application that prints from Windows, including; Microsoft Word, Crystal Reports, Access Reports, Goldmine and Act.

How It Works

Any 32-bit Windows application can be used to print documents for faxing. In cases where an application allows you to edit the printed text and insert database fields such as fax number, contact information, or delivery instructions, TargetFax™ Merge can use this information to fax the documents.

Microsoft Word Letters

Crystal Reports Financial Reports

Access Reports Budget Reports

Accounting Packages Invoices

Quoting Systems Quotes and Orders

Contact Managers & CRM's Announcements & Reminders

Mortgage Applications Rate Sheets

Custom Applications Statements

Mail-Merge and Report Writer Document Faxing

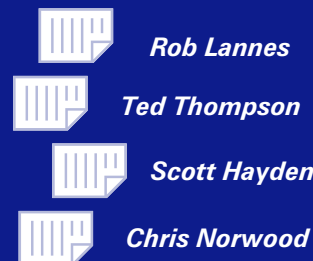

You can easily merge a database of customer names into a document or report which generates and sends separate faxes for each of the specified customers.
